1 What will be the output of the following code snippet? def func(a, b): return b if a == 0 else func(b % a, a) **print**(**func**(**30**, **75**)) a) 10 **b)** 20 c) 15 **d**) **0** Answser = 152 numbers = (4, 7, 19, 2, 89, 45, 72, 22)  $sorted\_numbers = sorted(numbers)$ even = lambda a: a % 2 == 0 even\_numbers = filter(even, sorted\_numbers) print(type(even\_numbers)) a) Int b) Filter c) List d) Tuple **Answer** = **Filter** 3) As what datatype are the \*args stored, when passed into a) Tuple b) List c) Dictionary d) none **Answer = Tuple** 4)  $set1 = \{14, 3, 55\}$  $set2 = \{82, 49, 62\}$ 

set3={99,22,17}

print(len(set1 + set2 + set3))
<ul> <li>a) 105</li> <li>b) 270</li> <li>c) 0</li> <li>d) Error</li> </ul> Answer = Error
5) What keyword is used in Python to raise exceptions?
a) raise
b) try
c) goto
d) except
Answer = raise
6) Which of the following modules need to be imported to handle date time computations in Python?
a) timedate
b) date
c) datetime
d) time
Answer = datetime
7) What will be the output of the following code snippet?
print(4**3 + (7 + 5)**(1 + 1))
<ul> <li>a) 248</li> <li>b) 169</li> <li>c) 208</li> <li>d) 233</li> </ul>
$\mathbf{Answer} = 208$
8) Which of the following functions converts date to corresponding time in Python?
a) strptime
b) strftime
c) both a) and b)
d) None  Answer = striptime
9) The python tuple isin nature.
a) mutable

b)immutable

c)unchangeable						
d) none						
Answer = immutable						
10)						
Theis a built-in function that returns a range object that consists series of integer numbers, which we can iterate using a for loop.						
<ul><li>A. range()</li><li>B. set()</li><li>C. dictionary{}</li><li>D. None of the mentioned above</li></ul>						
Answer = range()						
Question 11						
Amongst which of the following is a function which does not have any name?						
<ul> <li>A. Del function</li> <li>B. Show function</li> <li>C. Lambda function</li> <li>D. None of the mentioned above</li> </ul> Answer = Lambda function						
Question 12						
The module Pickle is used to						
<ul> <li>A. Serializing Python object structure</li> <li>B. De-serializing Python object structure</li> <li>C. Both A and B</li> <li>D. None of the mentioned above</li> </ul> Answer = Both A and B						
Question 13						
Amongst which of the following is / are the method of convert Python objects for writing data in a binary file?						
<ul> <li>A. set() method</li> <li>B. dump() method</li> <li>C. load() method</li> <li>D. None of the mentioned above</li> </ul> Answer = dump()						

14 . Amongst which of the following is / are the method used to unpickling data from a binary file:
<ul> <li>A. load()</li> <li>B. set() method</li> <li>C. dump() method</li> <li>D. None of the mentioned above</li> </ul> Answer = load()
15.
A text file contains only textual information consisting of
<ul> <li>A. Alphabets</li> <li>B. Numbers</li> <li>C. Special symbols</li> <li>D. All of the mentioned above</li> </ul> Answer = All of the mentioned above
16
Which Python code could replace the ellipsis () below to get the following output? (Select all that apply.)
captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
}
Enterprise Picard,
Voyager Janeway
Defiant Sisko
a) for ship, captain in captains.items():
print(ship, captain)
b) for ship in captains:
<pre>print(ship, captains[ship])</pre>
c) for ship in captains:

print(ship, captains)

d) both a and b

Answer = both a and b

**17**)

Which of the following lines of code will create an empty dictionary named captains?

```
a) captains = \{dict\}
b) type(captains)
c) captains.dict()
```

- d) captains  $= \{ \}$

Answer = captains =  $\{\}$ 

18) Now you have your empty dictionary named captains. It's time to add some data!

Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway", and "Defiant": "Sisko".

Which of the following code snippets will successfully add these key-value pairs to the existing captains dictionary?

```
a) captains { "Enterprise" = "Picard" }
     captains{"Voyager" = "Janeway"}
     captains{"Defiant" = "Sisko"}
     b) captains["Enterprise"] = "Picard"
     captains["Voyager"] = "Janeway"
     captains["Defiant"] = "Sisko"
     c) captains = {
       "Enterprise": "Picard",
       "Voyager": "Janeway",
       "Defiant": "Sisko",
     }
     d) None of the above
                                                Answer = captains = { "Enterprise": "Picard",
                                                          "Voyager": "Janeway,
"Definat": "Sisko",}
```

19) You're really building out the Federation Starfleet now! Here's what you have:

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
   "Discovery": "unknown",
```

Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

```
a) for item in captains.items():
```

```
print(f"The [ship] is captained by [captain].")
```

b) for ship, captain in captains.items():

```
print(f"The {ship} is captained by {captain}.")
```

c) for captain, ship in captains.items():

```
print(f"The {ship} is captained by {captain}.")
```

d) All are correct

Answer = B and C

20)

You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary:

```
captains = {
    "Enterprise": "Picard",
    "Voyager": "Janeway",
    "Defiant": "Sisko",
    "Discovery": "unknown",
}
```

What statement will remove the entry for the key "Discovery"?

- a) del captainsb) captains.remove()c) del captains["Discovery"]d) captains["Discovery"].pop()

**Answer = del captains["Discovery"]**
